Programming Skills

Languages: Python, Rust, JavaScript, TypeScript, Java, C#, SQL

Cloud: AWS (EC2, Lambda, S3, RDS, DynamoDB, CloudFront, ELB, Route53)

Frameworks: Django, FastAPI, Flask, Node.js

Infrastructure: Docker, Kubernetes

Databases: PostgreSQL, MongoDB, Redis

Tools: Pytest, Pandas, NumPy, SQLAlchemy, TypeORM, RabbitMQ, Amazon SQS.

Certifications

AWS Certified Solutions Architect – Professional - (Sep 2026- 2029) [Link](#)

Summary

Senior Software Engineer with 15 years of experience building backend systems and data platforms using Python. Experienced in designing scalable APIs and cloud-native services using AWS, Docker, and Kubernetes. Active open-source contributor with patches accepted in CPython, Django, NumPy, Pytest, and Rust ecosystem projects. Recently focused on building LLM-powered systems and developer tooling.

Key Achievements

Open-source contributor to CPython, Django, NumPy, Pytest, and Rust ecosystem tools (Cargo, rustfmt).

Past maintainer of Mongomock, collaborating with contributors to review patches and maintain library stability.

Helped scale the Jetty fintech platform from 1,500 to 10,000+ property managers.

Built a large-scale data extraction system collecting pricing data from 40k dealership websites.

Designed LLM-powered prototypes for assertion verification, contradiction detection, and dossier data generation.

Open Source & Projects

rust-bloomfilter: A simple bloom filter implementation in Rust - <https://github.com/srinivasreddy/rust-bloomfilter>

Experience

Pichuka — Creator & Lead Engineer
Personal Analytics Platform / pichuka.io

Built a cross-platform tracker that captures time spent across applications, websites, editors, and terminals.

Developed an hour-by-hour analytics dashboard for understanding application usage and focus patterns.

Architected the product to operate offline, keeping sensitive activity data on-device without third-party telemetry.

Created a silent background CLI supporting macOS, Linux, and Windows.

Provisioned and configured the complete supporting infrastructure on Hetzner using Ansible.

Built a GitHub Actions CI/CD pipeline to automate validation, builds, and deployments.

ToggleSoft

Remote

Senior Software Engineer

Dec 2023 - Current

Guardrail Technologies

Productionized an OCR and vision-model document extraction platform with an error-learning feedback loop, improving document and field-level F1 scores from 87% to 93%.

Built NLP inference services for statement verification and contradiction detection using BERT-based models, serving external clients via REST APIs built on FastAPI.

Designed and maintained RAG pipelines integrating open-source LLMs (LLaMA), connecting retrieval layers with model inference for dossier generation and fact-checking workflows.

Owned end-to-end prompt engineering and model evaluation — defining accuracy benchmarks, running regression tests, and iterating on prompts to improve output reliability across NLI tasks.

Architected the backend infrastructure for LLM-powered services including request routing, model serving, and API design, ensuring consistent latency and reliability for external users.

Andela

Remote

Senior Software Engineer

Mar 2022 – Dec 2023

Jetty — Fintech Platform for Rental Financial Services

Contributed to scaling the platform from 1,500 to 10,000+ property managers.

Built credit application features including Jetty Protect and Jetty Deposit, integrating multiple external APIs.

Contributed to migration of the insurance platform from Britecore to Socotra.

Built internal admin tools in Retool supporting loan servicing and operational workflows.

Built Datadog dashboards to monitor application performance and operational health.

Modus Create

Remote

Senior Software Engineer - Contract

Feb 2021 – Mar 2022

Clients: Hilco Streambank, Pfizer, Infinite Affiliates

Built a system to identify unallocated CIDR blocks and ASNs in the IPv4 space for auction or lease on *ipv4.global*.

Collaborated with DevOps to deploy and debug containerized services in Kubernetes.

Developed backend services for an affiliate marketing platform using Express, TypeScript, TypeORM, and Node.js.

Migrated self-managed databases to AWS managed services, improving reliability and operational efficiency.

Misc. Clients

Remote

Software Engineer

Sep 2019 – Feb 2021

Built data extraction systems using Puppeteer, TypeScript, TypeORM, and PostgreSQL.

Developed REST APIs with Django for client applications.

Delivered automation tools and utilities for Upwork clients.

Contributed to open-source Rust projects.

CasperLabs - Proof-of-stake Smart Contract Platform

Remote

Software Engineer - Contract

Feb 2019 - Aug 2019

Developed an integration testing framework using Python, Docker, and Drone CI/CD to validate blockchain invariants and improve deployment reliability.

Harman Connected Services

Pune, India

Lead Engineer

Mar 2015 - Nov 2018

Built and maintained applications (Credit App, Digital Contracts, Formtastic, DocCenter) used by dealerships to manage vehicle financing workflows.

Implemented multi-lender credit application features, reducing processing time by 20%.

Automated digital contract processing, improving compliance and reducing manual errors.

Developed Formtastic, a rules engine for vehicle types, forms, and state regulations.

Built DocCenter, a REST-based document service supporting the deal lifecycle (30% faster retrieval).

Implemented and optimized React components to improve UX and reduce defects.

Tech Mahindra

Hyderabad, India

Senior Technical Associate

May 2013 - Feb 2015

mHealth — Chronic Disease Management Platform

Developed backend views in Python/Django, emphasizing readability and maintainability.

Integrated multiple REST APIs to enable data exchange across application modules.

Gridlex

Hyderabad, India

Software Engineer

Jan 2012 - May 2013

Autoleg — Used Car Price Intelligence Platform

Built a rules-based extraction system to collect pricing data from 40k dealer websites, enabling longitudinal price tracking and market insights.

Designed and operated AWS infrastructure to support large-scale data ingestion and storage.

Prototyped scalable storage by deploying an HBase cluster using Apache Whirr, enabling analysis of high-volume dealership data.

Amphora Inc

Hyderabad, India

Software Engineer

Aug 2010 - Dec 2011

Symphony - Crude Oil Trading Platform

Maintained and enhanced an end-to-end trading system covering execution through settlement.

Stabilized the WPF UI layer of an end-to-end crude oil trading system supporting execution to settlement workflows.

Migrated legacy WebObjects plist persistence configurations to Hibernate HBM mappings with JUnit validation.

Ensured behavioral parity with the legacy Objective-C implementation via low-level debugging using gdb.

Education

Kakatiya Institute of Technology & Science, Telangana, India - 2003-2007

Bachelor of Electronics and Communications Engineering

CGPA 7/10

Awards & Certifications

Hall of Fame Award - Harman 2016 for outstanding contributions across teams

Coursera - Neural Networks and Deep Learning
